Summary

Full-Stack Software Developer specializing in cross-platform mobile and web application development using Flutter, FastAPI, Python, and MySQL. Proven track record of architecting scalable enterprise ERP modules, designing high throughput RESTful APIs, and implementing robust Clean Architecture with BLoC/Cubit state management. Experienced in end-to-end software delivery, database query optimization, and Linux server deployment to improve system performance and business operations.

Experience

Full-Stack Developer Amici Mercantile Inc. Businessware (Web and Mobile) - Architected and deployed 10+ enterprise ERP modules across Flutter (web/mobile) and FastAPI, improving operational workflows for ticketing, inventory tracking, and multi-stage approval processes. - Implemented production-grade BLoC/Cubit state management and Clean Architecture, establishing reusable UI component libraries that reduced frontend development time for new features by 25%. - Integrated high-performance RESTful APIs into Flutter applications, enabling real-time data synchronization and low-latency business transaction processing. Backend & Infrastructure - Designed and maintained scalable RESTful microservices using FastAPI and Python, maintaining seamless data flow across enterprise platforms. - Optimized complex MySQL relational schemas, indexing strategies, and stored procedures, achieving a 30%+ reduction in report generation execution times. - Managed application containerization and server deployments on Ubuntu Linux via Docker and SSH, ensuring high uptime and structured virtual environment dependency management. - Diagnosed and resolved critical backend and database bottlenecks to improve system reliability and transaction throughput. Front End Developer moodLearning - Engineered responsive, accessible React-based web interfaces. - Re-architected search and discovery functionality by implementing categorized filter systems and dynamic API integration, improving user search speed and navigation efficiency. - Implemented dynamic media components including animated carousels and interactive video modules to increase user engagement.	Quezon City, PH Dec. 2025 – Present
	UP Diliman, Engr Bldg 03/2025 - 04/2025

Projects

PetSymp – AI-Based Pet Illness Classification System Full Stack Developer - Built a cross-platform AI health application integrating a custom machine learning model achieving >85% illness classification accuracy across symptom inputs. - Developed FastAPI backend services for diagnosis history tracking, real-time symptom analysis, and Firebase Authentication. Kismet Dating Platform Full Stack Developer - Developed a full-stack social networking application featuring secure real-time messaging, profile matching logic, and user authentication. - Designed scalable MongoDB document structures and TypeScript backend endpoints for real-time data flow.	Flutter • FastAPI • Python • Firebase • Machine Learning
	Flutter • TypeScript • MongoDB

Skills & Interests

Programming Languages: Dart, Python, JavaScript, TypeScript, SQL, Swift.
Frameworks & Libraries: Flutter, FastAPI, Flask, React, BLoC, Cubit
Databases: MySQL, MariaDB, MongoDB, SQLite, Firebase Authentication, Cloud Firestore, Firebase Storage, Subabase.
State Management: BLoC, Cubit, Provider, Riverpod, React Hooks.
Tools & Platforms: Git, GitHub, GitLab CI/CD, Visual Studio Code, Android Studio, Postman, Figma, Ubuntu, Nginx, XCode
Architecture & Technologies: RESTful API Development, Clean Architecture, MVC, MVVM, State Management, SQL Query Optimization.
Deployment: Google Play Store, Apple App Store, Ubuntu Server.

Education

Technological Institute of the Philippines Bachelor of Science in Computer Science, <i>Academic Honors: Dean’s Lister / VPAA’s Lister</i>	Aurora, Cubao. Quezon City August 8, 2025
